# Windows Live error when sending images

When trying to send images from Mediadent using Windows Live, you can get a unknow error.

To resolve this you have to send the image as a attachment.

1. In Mediadent you do the same steps as before *File -> Export Picture Directory -> select the image(s) -> e-mail*

2. Windows Live will open up a e-mail *Click on the picture -> click on Format -> click on the paperclip.*

3. The image(s) will now be send as attachment and no longer as album
